

Activity #2: NeurOlympics

A Brain Module Activity: **How Does Your Brain Plan Your Movements?**

Description

Better be fast in this version of "Simon Says." Listen and perform only what "Mr. Brain" says. Make sure not to do it if he does not say it. This game will require you to run to different parts of the brain that have been set up. Not only will this game test your skill in running, but also your ability to recognize the function of different brain parts.

1

Follow Mr. Brain's Instructions

Do exactly what Mr. Brain says. If you follow his instructions, and avoid following the instructions that are not his, you will move on to the next round. Mr. Brain may ask you to run to parts of the brain responsible for different functions, in which case, run as fast as you can!

2

Stay As Long As You Can

The goal is to keep on playing the game and following what Mr. Brain says until everybody else is out. If you are the only person left, you will be the winner of the NeurOlympics!
